                                                                                                                                                                                                                                                                                           Genes were predicted from the integrated results of the following:GENSCANI.0, BLASTX2.0 as well as SplicePredictor (October 1998 version). The genomic sequence was searched against the non- redundant database NRP (PIR, SWISSPROT, GENPEPT, PDB) from MAFF DNA bank and the cDNA sequence database at RGP. Protein similarities of the coding regions were searched against NRP with BLASTP2.0. ESTS represent the identified cDNA sequences using BLASTN2.0 with the corresponding DDBJ accession no.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /translation="MIKAPTAVTVIGRSRCLEGLAAGGKRGDCEANRVSGLCPVADVE

Medical Center Dr. Rockville, MD 20850, USA, xiin@tigr.org
on Jun 2, 2000 this sequence version replaced gi:7769972.

* NOTE: This is a 'working draft' sequence. It currently
consists of I' contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence
as soon as it is available and the accession number will

* be preserved.

of diaminopimelate-D-alanyi-D-glutamyi-2,

enthranilate synthase component I; aspartate carbamoyltransferase;

anthranilate synthase component I; aspartate carbamoyltransferase;

carbonic anhydrase; catabolite gene activator protein; cyclase;

cytochrome CytM; cytochrome c oxidase folding protein; cyclase;

factor IS; extragenic suppressor SuhB; fatty acid desaturase;

factor IS; extragenic suppressor SuhB; fatty acid desaturase;

hemolysin; hydrogenase expression/formation protein HypC; inner

membrane protein; melibiose carrier protein; membrane bound protein

LytR; ornithine acetyltransferase; oxygen independent

coprophorphyrinogen III oxidase; pantothenate synthetase;

photosystem II DI protein; polyA polymerase; regulatory components

transduction histoline kinase; serine acetyltransferase; tRNA-II;

Synechocysiis sy, (strain:PCC6803) DNA.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
